

On the Subject of Shiro's Birthday

When you have so many birthdays you must know how to organize the best parties.

- Count all your birthday hats, make sure there is enough for every Walter or they will start wrecking the place.
- There is cake! It's not a lie. Every group of Walters will eat a cake so make sure there is enough cake for them all or they might eat everything at the house.
- The more the merrier, count every happy Walter attending the party! You can also count unhappy Walters.
- With all this information you can get a party meter! If the party meter is at least 100% do not stop the party because it's your birthday for the entire bomb's duration.

|                  |     |
|------------------|-----|
| Birthday hat     | 20% |
| Birthday cake    | 20% |
| Walter           | 10% |
| Group of Walters | 30% |

- For a party meter of less than 30% it's a horrible party and the minutes drag on. You must watch the second number of the timer.
- If it's more than 30% then it's a pretty good party but the seconds fly by. You must watch the third number of the timer.
- And most importantly, you MUST count strikes!
- Subtract unhappy types of attendees from the meter. Groups of Walters might not be satisfied with a lack of cakes but single Walters with enough hats are still happy.

|              |      | Strike Number          |                        |
|--------------|------|------------------------|------------------------|
|              |      | Odd                    | Even                   |
| Timer Number | Odd  | It's your birthday     | It's not your birthday |
|              | Even | It's not your birthday | It's your birthday     |

Press the button at the right time to solve the needy. DO NOT PRESS FOR A METER OF 100%
